1 Editorial and Evidence Note

This trilingual manual is grounded in the supplied master prompt, the current repository, verified architecture and workflow assets, the live Supabase migration ledger, and the subscription verification report. English is the primary reference language; Kiswahili and French accompany every major chapter. Technical routes, table names, package codes, and status labels remain in their verified project form.

Editorial note / Dokezo la uhariri / Note éditoriale: A status such as PLANNED, UI ONLY, PARTIALLY IMPLEMENTED, CONFIGURATION REQUIRED, or EXTERNAL SERVICE REQUIRED is an evidence boundary, not a negative judgment and not a current feature promise.

2 Part 1: The Story Behind SMART MANAGER

Hadithi ya SMART MANAGER

L'histoire de SMART MANAGER

SMART MANAGER is designed around a practical observation: a growing organization loses time and control when its operations are scattered across notebooks, spreadsheets, messaging channels, separate finance tools, disconnected stock records, and manual reports. The product therefore brings the verified business surfaces of this repository into one authenticated workspace, where records, roles, workflows, and management views can be connected rather than repeatedly reconstructed.

SMART MANAGER imejengwa juu ya uelewa wa vitendo: taasisi inayokua hupoteza muda na udhibiti pale shughuli zinapotawanyika kwenye daftari, lahajedwali, ujumbe, zana tofauti za fedha, rekodi za bidhaa na ripoti za mikono. Bidhaa hii huleta sehemu za biashara zilizothibitishwa na mradi huu kwenye nafasi moja salama ya kazi, ambako rekodi, majukumu, mtiririko wa kazi na maoni ya uongozi vinaweza kuunganishwa.

SMART MANAGER part d'un constat pratique : une organisation en croissance perd du temps et du contrôle lorsque ses opérations sont dispersées entre carnets, tableurs, messageries, outils financiers séparés, stocks isolés et rapports manuels. Le produit réunit donc les surfaces métier vérifiées du dépôt dans un espace de travail authentifié, afin de relier les données, les rôles, les processus et les vues de pilotage.

English focus	Kiswahili	Français	Verified guidance
Fragmented records	Rekodi zilizotawanyika	Données fragmentées	Centralized access reduces duplicate re-entry and improves the path from an operational action to a management view.
Limited visibility	Mwonekano mdogo	Visibilité limitée	Dashboards, reports, audit evidence, and command centers make the state of connected operations easier to inspect.
Weak accountability	Uwajibikaji dhaifu	Responsabilité limitée	Authentication, roles, company scope, audit events, and protected procedures establish a clearer control boundary.
Scaling pressure	Shinikizo la ukuaji	Pression de croissance	A modular architecture allows an organization to adopt relevant capabilities without claiming that every surface is equally complete.

Figure 1: Figure 1 — Existing SMART MANAGER public homepage evidence.

3 Part 2: Why SMART MANAGER?

Kwa nini SMART MANAGER?

Pourquoi SMART MANAGER ?

The product name expresses a management promise rather than a claim of artificial intelligence everywhere. SMART means connected information, automation where implemented, intelligent analysis where configured, real-time visibility where data is available, and support for decisions. MANAGER means control, planning, coordination, accountability, monitoring, execution, and growth. The intended movement is from uncertainty to visibility, from visibility to control, from control to intelligence, and from intelligence to action.

Jina la bidhaa linaeleza ahadi ya usimamizi, si dai kwamba kila sehemu ina akili bandia. SMART inamaanisha taarifa zilizounganishwa, otomatiki pale ilipojengwa, uchambuzi wa akili pale umewekwa, mwonekano wa karibu na wakati halisi pale data ipo, na msaada wa maamuzi. MANAGER inamaanisha udhibiti, mipango, uratibu, uwajibikaji, ufuatiliaji, utekelezaji na ukuaji.

Le nom du produit exprime une promesse de gestion, et non l'affirmation que chaque surface utilise l'intelligence artificielle. SMART signifie informations connectées, automatisation lorsqu'elle est implémentée, analyse intelligente lorsqu'elle est configurée, visibilité proche du temps réel lorsque les données sont disponibles et aide à la décision. MANAGER signifie contrôle, planification, coordination, responsabilité, suivi, exécution et croissance.

English focus	Kiswahili	Français	Verified guidance
Uncertainty → visibility	Kutokuwa na uhakika → mwonekano	Incertitude → visibilité	Management begins with a trustworthy view of what is recorded and what remains unconfigured.
Visibility → control	Mwonekano → udhibiti	Visibilité → contrôle	Roles, permissions, tenant boundaries, and auditability turn information into controlled action.
Control → intelligence	Udhibiti → uelewa	Contrôle → intelligence	Reports, analytics, AI services, and reconciliations add interpretation when their prerequisites exist.
Intelligence → growth	Uelewa → ukuaji	Intelligence → croissance	A disciplined operational record becomes a foundation for measured expansion.

4 Part 3: SMART MANAGER for Every Business Size

SMART MANAGER kwa kila ukubwa wa biashara

SMART MANAGER pour chaque taille d'entreprise

Small businesses can use the platform to establish orderly customer, sales, stock, payment, and accountability records early. Growing businesses can connect more people, branches, departments, and transaction streams. Larger organizations can use the company-scoped architecture, role boundaries, audit evidence, dashboards, integrations, and global administration surfaces where those capabilities are enabled and configured. The product should be adopted according to verified operational need, not according to a generic promise that every module is complete for every organization.

Biashara ndogo zinaweza kutumia mfumo kuanzisha mapema rekodi zilizopangwa za wateja, mauzo, bidhaa, malipo na uwajibikaji. Biashara zinazokua zinaweza kuunganisha watu, matawi, idara na miamala zaidi. Mashirika makubwa yanaweza kutumia usanifu wa kampuni, mipaka ya majukumu, ushahidi wa ukaguzi, dashibodi, miunganisho na usimamizi wa jumla pale uwezo huo umewezeshwa na kusanidiwa.

Les petites entreprises peuvent utiliser la plateforme pour structurer tôt les données clients, ventes, stocks, paiements et responsabilités. Les entreprises en croissance peuvent relier davantage de personnes, de succursales, de départements et de flux de transactions. Les grandes organisations peuvent exploiter l'architecture par entreprise, les rôles, les preuves d'audit, les tableaux de bord, les intégrations et l'administration globale lorsque ces capacités sont activées et configurées.

English focus	Kiswahili	Français	Verified guidance
Small business	Biashara ndogo	Petite entreprise	Start with the core surfaces that create control: customers, sales, stock, payments, finance, users, and reporting.
Growing business	Biashara inayokua	Entreprise en croissance	Add procurement, POS, workforce, support, property, industry workspaces, and scheduled controls as operational complexity increases.

English focus	Kiswahili	Français	Verified guidance
Large business	Biashara kubwa	Grande entreprise	Use company scope, role-aware access, audit, command centers, integrations, and platform administration with governance.

5 Part 4: The Product Tour and Operating Model

Ziara ya bidhaa na namna ya uendeshaji

Visite du produit et modèle opératoire

The verified user journey begins at the public brand entry, continues through authentication and account verification, then establishes or joins a company workspace. The authenticated shell presents role-aware navigation and connects the user to the modules that are available for the workspace. An operational action moves through UI validation, a protected server boundary, database constraints and tenant scope, an auditable result, and—where configured—a notification, report, integration, or scheduled follow-up. Safari ya mtumiaji iliyo kwenye mradi huanza kwenye ukurasa wa chapa, inaendelea kupitia uthibitishaji wa akaunti, kisha huunda au kujiunga na nafasi ya kampuni. Ganda salama la programu huonyesha urambazaji unaozingatia jukumu na kuunganisha mtumiaji na moduli zinazopatikana. Kitendo cha uendeshaji hupitia uthibitishaji wa UI, mpaka wa seva, masharti ya database na kampuni, matokeo yanayoweza kukaguliwa, na—pale kumesanidiwa—arifa, ripoti, muunganisho au ufuatiliaji uliopangwa.

Le parcours vérifié commence sur l'entrée publique de la marque, se poursuit par l'authentification et la vérification du compte, puis crée ou rejoint un espace d'entreprise. La coquille authentifiée présente une navigation adaptée au rôle et relie l'utilisateur aux modules disponibles. Une action opérationnelle traverse la validation de l'interface, une frontière serveur protégée, les contraintes de base de données et le périmètre de l'entreprise, un résultat auditable et, lorsque configuré, une notification, un rapport, une intégration ou un suivi planifié.

English focus	Kiswahili	Français	Verified guidance
Discover → register	Gundua → sajili	Découvrir → s'inscrire	Public entry and secure onboarding establish the first relationship with the platform.
Company → workspace	Kampuni → nafasi ya kazi	Entreprise → espace de travail	Company identity becomes the boundary for data, roles, and operational context.
Action → evidence	Kitendo → ushahidi	Action → preuve	Protected procedures, database constraints, and audit records provide the control path.
Result → management	Matokeo → uongozi	Résultat → pilotage	Reports and command centers turn recorded work into a management conversation.

Figure 2: Figure 2 – Authentication and secure onboarding workflow evidence.

Figure 3: Figure 3 – Live module map evidence.

6 Part 5: The SMART MANAGER Module Encyclopedia

Ensaiklopedia ya moduli za SMART MANAGER

Encyclopédie des modules SMART MANAGER

The following inventory is grounded in the project's verified module registry, source files, migration names, and tested persistence boundaries. Status labels are deliberate: IMPLEMENTED means a connected source and/or database workflow is present; PARTIALLY IMPLEMENTED means only part of the end-to-end contract is verified; UI ONLY means a surface exists without a complete persistence claim; CONFIGURATION REQUIRED and EXTERNAL SERVICE REQUIRED identify prerequisites; PLANNED and NOT VERIFIED are not product promises.

Orodha ifuatayo imetokana na rejista ya moduli, mafaili ya chanzo, majina ya migrations na mipaka ya uhifadhi iliyojaribiwa. Lebo za hali zimetumika kwa makusudi: IMEJENGWA inamaanisha chanzo na/ au mtiririko wa database umeonekana; IMEJENGWA KWA SEHEMU inamaanisha mkataba kamili bado haujathibitishwa; UI TU inamaanisha mwonekano upo bila dai la uhifadhi kamili; INAHITAJI USANIDI na INAHITAJI HUDUMA YA NJE zinaonyesha masharti; ILIYOPANGWA si ahadi ya sasa.

L'inventaire suivant est fondé sur le registre des modules, les fichiers source, les noms de migrations et les frontières de persistance testées. Les statuts sont intentionnels : IMPLÉMENTÉ signifie qu'un flux source et/ou base de données est présent ; PARTIELLEMENT IMPLÉMENTÉ signifie que le contrat de bout en bout n'est pas entièrement vérifié ; INTERFACE SEULE indique une surface sans promesse de persistance complète ; CONFIGURATION REQUISE et SERVICE EXTERNE REQUIS signalent des prérequis ; PLANIFIÉ n'est pas une promesse actuelle.

7 Part 6: Connected Workflows

Mtiririko wa kazi uliunganishwa

Flux de travail connectés

SMART MANAGER should be understood as a set of connected control paths rather than isolated screens. The most important connections are sales to inventory and finance; procurement to vendors, stock, and payables; customers to CRM, sales, payments, and support; users to roles, permissions, modules, actions, and audit; and subscriptions to company access, payment verification, invoices, notifications, and reporting.

SMART MANAGER inapaswa kueleweka kama seti ya njia za udhibiti zilizounganishwa, si skrini zilizotengwa. Miunganisho muhimu ni mauzo na hesabu pamoja na fedha; ununuzi na wasambazaji, bidhaa na madeni; wateja na CRM, mauzo, malipo na huduma; watumiaji na majukumu, ruhusa, moduli, vitendo na ukaguzi; na usajili na ruhusa ya kampuni, uthibitishaji wa malipo, ankara, arifa na ripoti.

SMART MANAGER doit être compris comme un ensemble de chemins de contrôle connectés et non comme des écrans isolés. Les connexions majeures sont ventes–stocks–finance ; achats–fournisseurs–stocks–dettes ; clients–CRM–ventes–paiements–support ; utilisateurs–rôles–permissions–modules–actions–audit ; et abonnements–accès entreprise–vérification des paiements–factures–notifications–rapports.

English focus	Kiswahili	Français	Verified guidance
Sales → Inventory → Finance → Reports	Mauzo → Hesabu → Fedha → Ripoti	Ventes → Stocks → Finance → Rapports	A recorded sale can become stock movement, financial evidence, and management information where the relevant contracts are enabled.

English focus	Kiswahili	Français	Verified guidance
Procurement → Supplier → Payables → Finance	Ununuzi → Msambazaji → Madeni → Fedha	Achats → Fournisseur → Dettes → Finance	Purchasing controls are designed to preserve the relationship between what was ordered, received, owed, and reported.
User → Role → Permission → Action → Audit	Mtumiaji → Jukumu → Ruhusa → Kitendo → Ukaguzi	Utilisateur → Rôle → Permission → Action → Audit	Security is a workflow: identity and role boundaries precede access, mutation, and evidence.
Subscription → Access → Payment → Invoice	Usajili → Ruhusa → Malipo → Ankara	Abonnement → Accès → Paiement → Facture	The billing model uses server and database checks so browser state cannot grant an entitlement.

Figure 4: Figure 4 — Connected business workflow evidence.

Figure 5: Figure 5 — Sales-to-receipt workflow evidence.

Figure 6: Figure 6 — Inventory movement workflow evidence.

8 Part 7: Subscriptions and Customer Value

Usajili na thamani kwa mteja

Abonnements et valeur client

The live subscription model has one free package and six paid packages. FREE_15 provides 15 days at TZS 0 and requires no payment. Each paid package is monthly-only and represents one paid calendar month plus one promotional bonus calendar month, for two total calendar months. The application and database verify the selected package, amount, tenant, provider order, payment state, and idempotency key. Expired Free access transitions to RequiresPlan without an automatic charge; paid expiry uses calendar-month arithmetic.

Mfumo wa sasa wa usajili una kifurushi kimoja cha bure na vifurushi sita vya kulipia. FREE_15 hutoa siku 15 kwa TZS 0 bila malipo. Kila kifurushi cha kulipia ni cha kila mwezi na kinawakilisha mwezi mmoja uliolipiwa pamoja na mwezi mmoja wa ziada wa ofa, jumla ya miezi miwili ya kalenda. Programu na database huthibitisha kifurushi, kiasi, kampuni, oda ya mtoa huduma, hali ya malipo na ufunguo wa kutorudia.

Le modèle actuel comprend une offre gratuite et six offres payantes. FREE_15 offre 15 jours à 0 TZS sans paiement. Chaque offre payante est mensuelle et représente un mois civil payé plus un mois civil promotionnel, soit deux mois au total. L'application et la base vérifient l'offre, le montant, l'entreprise, la commande du prestataire, l'état du paiement et la clé d'idempotence. L'expiration du gratuit passe à RequiresPlan sans prélèvement automatique ; l'expiration payante utilise des mois calendaires.

English focus	Kiswahili	Français	Verified guidance
FREE_15	FREE_15	FREE_15	TZS 0; 15 days; no payment; no automatic charge; expiry leads to a paid-plan requirement while data is retained.
TWIGA / TEMBO / SIMBA	TWIGA / TEMBO / SIMBA	TWIGA / TEMBO / SIMBA	TZS 5,000 / 10,000 / 15,000 per month; one paid month plus one bonus month; two calendar months total.
SIMBA SC / YANGA SC / AZAM FC	SIMBA SC / YANGA SC / AZAM FC	SIMBA SC / YANGA SC / AZAM FC	TZS 4,500 / 9,000 / 7,000 per month; one paid month plus one bonus month; two calendar months total.

Figure 7: Figure 7 — Verified payment/webhook state-machine evidence.

Code	Name	Nom	Verified commercial contract
FREE_15	FREE	FREE	TZS 0; 15 days; no payment.
TWIGA	TWIGA	TWIGA	TZS 5,000/month; 1 paid + 1 bonus; 2 calendar months.
TEMBO	TEMBO	TEMBO	TZS 10,000/month; 1 paid + 1 bonus; 2 calendar months.
SIMBA	SIMBA	SIMBA	TZS 15,000/month; 1 paid + 1 bonus; 2 calendar months.
SIMBA_SC	SIMBA SC	SIMBA SC	TZS 4,500/month; 1 paid + 1 bonus; 2 calendar months.
YANGA_SC	YANGA SC	YANGA SC	TZS 9,000/month; 1 paid + 1 bonus; 2 calendar months.
AZAM_FC	AZAM FC	AZAM FC	TZS 7,000/month; 1 paid + 1 bonus; 2 calendar months.

9 Part 8: Operating Routines and Learning Paths

Ratiba za uendeshaji na njia za kujifunza

Routines opératoires et parcours d'apprentissage

A disciplined customer should establish a first-day baseline, a weekly review habit, and a monthly management rhythm. Beginners learn identity, navigation, company context, and safe record creation. Operational users learn their module's inputs, validations, outputs, and exception paths. Managers learn dashboards, approvals, reconciliations, reports, and accountability. Administrators learn tenancy, permissions, integrations, scheduled services, database migrations, security evidence, and recovery boundaries. Mteja mwenye nidhamu anzishe msingi wa siku ya kwanza, utaratibu wa mapitio ya kila wiki na mzunguko wa uongozi wa kila mwezi. Mwanzo ajifunze utambulisho, urambazaji, kampuni na uundaji salama wa rekodi. Mtumiaji wa uendeshaji ajifunze pembejeo, uthibitishaji, matokeo na njia za kasoro za moduli yake. Meneja ajifunze dashibodi, vibali, upatanisho, ripoti na uwajibikaji. Msimamizi ajifunze kampuni, ruhusa, miunganisho, huduma zilizopangwa, migrations, ushahidi wa usalama na mipaka ya urejeshaji.

Un client discipliné établit une base le premier jour, une revue hebdomadaire et un rythme mensuel de pilotage. Le débutant apprend l'identité, la navigation, le contexte de l'entreprise et la création sûre de données. L'utilisateur opérationnel apprend les entrées, validations, sorties et exceptions de son module. Le manager apprend les tableaux de bord, validations, rapprochements, rapports et responsabilités. L'administrateur apprend la multi-tenance, les permissions, les intégrations, les services planifiés, les migrations, les preuves de sécurité et les limites de reprise.

English focus	Kiswahili	Français	Verified guidance
Beginner	Mwanzo	Débutant	Learn the workspace, role, module purpose, safe input, and where to find help.
Operational user	Mtumiaji wa uendeshaji	Utilisateur opérationnel	Execute repeatable workflows, check validations, and resolve normal exceptions.
Manager	Meneja	Manager	Review movement, cash, customers, people, exceptions, reports, and approvals.
Administrator / expert	Msimamizi / mtaalamu	Administrateur / expert	Govern access, configuration, integrations, scheduled services, audit, and recovery.

10 Part 9: Security, Administration, and Trust

Usalama, usimamizi na uaminifu

Sécurité, administration et confiance

The project's security model is layered. Authentication establishes the user session. Authorization establishes role and manager boundaries. Company scope and Row Level Security help separate tenant data. Server-side API handlers keep provider credentials away from the browser. Database functions use explicit search paths, role grants, constraints, and audit records. Global administration is a separate control plane and must not be confused with ordinary company operations. Customers should treat configuration, provider credentials, and recovery procedures as part of the security program, not as afterthoughts.

Mfumo wa usalama una tabaka kadhaa. Uthibitishaji huanzisha kikao cha mtumiaji. Uidhinishaji huweka mipaka ya jukumu na meneja. Kampuni na Row Level Security husaidia kutenganisha data. Handlers za seva huweka siri za watoa huduma mbali na browser. Functions za database hutumia search path wazi, grants, masharti na rekodi za ukaguzi. Usimamizi wa jumla ni eneo tofauti na shughuli za kampuni za kawaida.

Le modèle de sécurité est en couches. L'authentification établit la session. L'autorisation définit les limites de rôle et de gestion. Le périmètre entreprise et la sécurité au niveau des lignes contribuent à séparer les données. Les handlers serveur gardent les secrets des prestataires hors du navigateur. Les fonctions de base utilisent des chemins explicites, des droits, des contraintes et des audits. L'administration globale est un plan de contrôle distinct des opérations ordinaires.

English focus	Kiswahili	Français	Verified guidance
Authentication	Uthibitishaji	Authentification	Use verified sessions and do not share credentials or bypass the supported entry path.

English focus	Kiswahili	Français	Verified guidance
Authorization and RLS	Uidhinishaji na RLS	Autorisation et RLS	Use role, company, and policy boundaries; never treat a browser-visible control as proof of permission.
Secrets and integrations	Siri na miunganisho	Secrets et intégrations	Keep Supabase service credentials, provider keys, and webhook secrets server-side.
Audit and recovery	Ukaguzi na urejeshaji	Audit et reprise	Keep audit evidence, backups, migration records, and incident procedures reviewable.

SMART MANAGER — Integration Authentication and Tenant Isolation

Figure 8: Figure 8 — Authentication and tenancy evidence.

Figure 9: Figure 9 — Financial control-flow evidence.

11 Part 10: Current Limitations and the Future

Mipaka ya sasa na mustakabali

Limites actuelles et avenir

A trustworthy product book must distinguish what is implemented from what is planned. Some surfaces depend on external providers, credentials, scheduled execution, or connected business records. Some registry entries are UI-only or partially verified. The roadmap should therefore prioritize deployment alignment, complete provider configuration, stronger endpoint-by-endpoint review of privileged routines, richer customer-facing screenshots, and measured validation of each industry workflow. Future vision should extend the verified foundation rather than obscure current limitations.

Kitabu cha bidhaa kinachoaminika lazima kitenganishe kilichojengwa na kilichopangwa. Baadhi ya sehemu zinahitaji watoa huduma wa nje, siri, uendeshaji uliopangwa au rekodi za biashara zilizounganishwa. Baadhi ya entries za rejista ni UI tu au zimehakikiwa kwa sehemu. Kwa hiyo roadmap ianze na ulinganifu wa deployment, usanidi wa huduma, mapitio ya routines zenye nguvu, screenshots zaidi za wateja na uthibitishaji wa kila workflow ya sekta.

Un livre produit fiable doit distinguer ce qui est implémenté de ce qui est planifié. Certaines surfaces dépendent de prestataires externes, de secrets, d'exécution planifiée ou de données métier connectées. Certaines entrées du registre sont uniquement des interfaces ou partiellement vérifiées. La feuille de route doit donc commencer par l'alignement du déploiement, la configuration des services, la revue des routines privilégiées, davantage de captures client et la validation mesurée de chaque workflow sectoriel.

English focus	Kiswahili	Français	Verified guidance
Implemented	Imejengwa	Implémenté	Connected source, database, or tested workflow evidence exists.
Configuration required	Inahitaji usanidi	Configuration requise	The contract exists but depends on environment variables, roles, storage, provider, or schedule configuration.
External service required	Inahitaji huduma ya nje	Service externe requis	TRA, AI, WhatsApp, email, mobile money, or other providers must be configured and available.
Planned / not verified	Iliyopangwa / haijathibitishwa	Planifié / non vérifié	Do not market this classification as a current guaranteed capability.

Smart Manager — Live Deployment Observation

Figure 10: Figure 10 — Deployment observation evidence.

12 Complete Module Encyclopedia

The inventory below is grounded in the project module registry, source files, migration names, and tested persistence boundaries. Status labels distinguish evidence from aspiration.

Module / English	Kiswahili	Français	Status and verified evidence
Public Brand & Marketing Entry	Ukurasa wa chapa na masoko	Accueil de marque et marketing	IMPLEMENTED: Home.tsx and the public entry experience establish the product proposition and sign-in path.
Authentication & Secure Onboarding	Uthibitishaji na uanzishaji salama	Authentification et intégration sécurisée	IMPLEMENTED: LoginModuleEcosystem, account verification, company creation, and protected session boundaries are present.
Master Application Shell & Navigation	Ganda kuu la programu na urambazaji	Coquille applicative et navigation	IMPLEMENTED: DashboardLayout and BusinessSphereDashboard provide the authenticated workspace shell.
Profile Identity Center	Kituo cha utambulisho wa wasifu	Centre d'identité du profil	IMPLEMENTED: Profile identity and preference services are backed by authenticated self-service operations.
Executive Dashboard	Dashibodi ya uongozi	Tableau de bord exécutif	IMPLEMENTED: Executive and command-center surfaces summarize connected business information.
Daily Business Briefing	Muhtasari wa kila siku wa biashara	Briefing commercial quotidien	PARTIALLY IMPLEMENTED: Briefing and scheduled report services exist; availability depends on configured data and delivery services.
CRM & Customer Pipeline	CRM na mfuatano wa wateja	CRM et pipeline clients	IMPLEMENTED: Customer and lead persistence boundaries, interactions, and sales-facing workflows are represented.
Sales & Billing	Mauzo na malipo	Ventes et facturation	IMPLEMENTED: Sales document contracts, invoices, payments, and billing controls are represented in source and database history.
Point of Sale (POS)	Mauzo ya moja kwa moja (POS)	Point de vente (POS)	IMPLEMENTED: Transaction, return, customer credit, register control, loyalty, reconciliation, and audit paths are present.
Inventory & Warehouse Management	Usimamizi wa hesabu na ghala	Stocks et entrepôts	IMPLEMENTED: Inventory movement and warehouse command-center surfaces connect operational quantities to sales and procurement.

Module / English	Kiswahili	Français	Status and verified evidence
Procurement & Vendor Management	Ununuzi na wasambazaji	Achats et fournisseurs	IMPLEMENTED: Procurement persistence boundaries and vendor workflows connect purchasing to stock and finance.
Finance & Accounting	Fedha na uhasibu	Finance et comptabilité	IMPLEMENTED: Finance foundations, journal core, reconciliation, and financial command centers are migration-backed.
Reports & Scheduled Reporting	Ripoti na ripoti zilizopangwa	Rapports et rapports planifiés	IMPLEMENTED: Report delivery, schedules, exports, and management views are represented by tested server services.
Human Resources & Payroll	Rasilimali watu na mishahara	Ressources humaines et paie	IMPLEMENTED: Employee, workforce authorization, Tanzania payroll, leave decisions, and role approvals are present.
Manufacturing & Work Orders	Uzalishaji na maagizo ya kazi	Fabrication et ordres de travail	PARTIALLY IMPLEMENTED: The project inventory recognizes the surface and persistence boundaries; operational depth must be verified per deployment.
Supply Chain & Fleet	Mnyororo wa ugavi na magari	Chaîne logistique et flotte	IMPLEMENTED: Fleet management source and controls cover operational fleet records and scheduled controls.
Marketing Campaigns	Kampeni za masoko	Campagnes marketing	UI ONLY: The surface exists in the module registry; campaign execution depth is not presented as fully verified.
E-Commerce Storefront	Duka la kielektroniki	Boutique e-commerce	PLANNED: The project inventory names the surface, but a production commerce contract is not asserted by this book.
Documents & Secure Files	Nyaraka na mafaili salama	Documents et fichiers sécurisés	IMPLEMENTED: Document and notebook persistence boundaries are tested; storage configuration remains environment-dependent.
Projects & Task Management	Miradi na usimamizi wa kazi	Projets et tâches	PARTIALLY IMPLEMENTED: Project persistence boundaries are represented; complete project operations should be validated with customer data.
Customer Support & Helpdesk	Huduma kwa wateja na helpdesk	Support client et helpdesk	IMPLEMENTED: Support workflow, ticket persistence, authenticated policy, metrics, and inbox surfaces are present.
Enterprise Analytics & BI	Uchambuzi wa biashara na BI	Analytique d'entreprise et BI	PARTIALLY IMPLEMENTED: Analytics command centers and predictive surfaces

Module / English	Kiswahili	Français	Status and verified evidence
			exist; results depend on connected records and configuration.
Notifications & Alerting	Arifa na tahadhari	Notifications et alertes	IMPLEMENTED: Notification history, reminders, scheduled jobs, and subscription notifications are represented.
Activity Stream & Audit Evidence	Mtiririko wa shughuli na ushahidi wa ukaguzi	Flux d'activité et preuves d'audit	IMPLEMENTED: Audit logs, evidence export, compliance views, and billing audits provide traceability.
Integration Hub	Kitovu cha miunganisho	Hub d'intégrations	CONFIGURATION REQUIRED: Webhook, provider, email, mobile-money, and data integrations are available only when their services are configured.
Workflow Studio & Marketplace	Studio ya mtiririko wa kazi na soko	Studio des flux et marketplace	UI ONLY: The project inventory recognizes the surface; a complete marketplace execution contract is not asserted.
Collaboration Hub	Kitovu cha ushirikiano	Hub de collaboration	PARTIALLY IMPLEMENTED: Collaboration and email-link checks exist, subject to configured delivery channels.
TRA VFD Fiscalization Portal	Portal ya TRA VFD	Portail de fiscalisation TRA VFD	EXTERNAL SERVICE REQUIRED: TRA fiscal and Z-report services are present but require external credentials and provider availability.
AI Assistant & Smart Intelligence	Msaidizi wa AI na akili ya biashara	Assistant IA et intelligence	EXTERNAL SERVICE REQUIRED: AI approvals, summaries, and assistant workflows are protected and require configured model/service access.
WhatsApp Web Integration	Muunganisho wa WhatsApp Web	Intégration WhatsApp Web	CONFIGURATION REQUIRED: The UI supports linked-device interaction patterns; external WhatsApp/provider configuration is required.
Microfinance	Mikopo midogo	Microfinance	IMPLEMENTED: Production microfinance workflows, credit scoring, collections, and escalation services are represented.
Money Agent	Wakala wa fedha	Agent de transfert d'argent	IMPLEMENTED: Money Agent core operations, fee/commission controls, ledger repair, and reconciliation are present.

Module / English	Kiswahili	Français	Status and verified evidence
VICOBA / SACCOS & Community Groups	VICOBA / SACCOS na vikundi vya jamii	VICOBA / SACCOS et groupes communautaires	IMPLEMENTED: Community group schema, relationship guards, documents, approvals, and security hardening are migration-backed.
Healthcare / Clinic	Afya na kliniki	Santé et clinique	IMPLEMENTED: Healthcare operations, claims, reminders, portals, interoperability, and internal-role boundaries are represented.
School Management	Usimamizi wa shule	Gestion scolaire	IMPLEMENTED: School management and linked learner portal surfaces are present with fee, attendance, assignment, and report-card paths.
Pharmacy Management	Usimamizi wa famasi	Gestion de pharmacie	IMPLEMENTED: Pharmacy operations and tenant-safe persistence boundaries are represented.
Hotel & Hospitality	Hoteli na ukarimu	Hôtellerie et hospitalité	IMPLEMENTED: Hospitality core, POS/services, guest engagement, finance reconciliation, and access remediation are present.
Restaurant & F&B	Mgahawa na chakula/vinywaji	Restaurant et restauration	IMPLEMENTED: Restaurant F&B core, operations extension, Tanzania fiscal configuration, and helper hardening are present.
Fleet Management	Usimamizi wa magari	Gestion de flotte	IMPLEMENTED: Fleet management core and scheduled control surfaces are represented.
Banking & MFI	Benki na MFI	Banque et IMF	IMPLEMENTED: Bank/MFI core, security hardening, credit ledger, disbursement, and workflow completion are present.
Employee Portal	Portal ya mfanyakazi	Portail employé	IMPLEMENTED: Employee portal, self-service boundaries, payroll, leave, and authorization controls are present.

FREE_15	Kifurushi cha siku 15	Offre de 15 jours	Free access for 15 days at TZS 0.
Requires-Plan	Inahitaji kifurushi	Forfait requis	Access state requiring a confirmed package.

17 SMART MANAGER — From Business Operations to Business Intelligence

SMART MANAGER is strongest when it makes work measurable, responsibility visible, and decisions easier to explain. Its value is the disciplined connection of people, records, workflows, controls, integrations, and insight—not a claim that every problem is solved automatically.

SMART MANAGER huwa na nguvu zaidi inapofanya kazi ipimwe, uwajibikaji uonekane na maamuzi yaelezeke. Thamani yake ni kuunganisha watu, rekodi, mitiririko, udhibiti, miunganisho na uelewa kwa nidhamu—si dai kwamba kila tatizo linatatuliwa kiotomatiki.

SMART MANAGER est le plus utile lorsqu'il rend le travail mesurable, les responsabilités visibles et les décisions explicables. Sa valeur est la connexion disciplinée des personnes, données, processus, contrôles, intégrations et analyses—et non la promesse de résoudre automatiquement chaque problème.
